This paper is dedicated to one of the most important agricultural sectors: transportation. This is a sector that has never lost its functions and serves as a vital artery for our country. This paper discusses the development of this sector, along with its associated problems and risks.

The object and subject of this research is the territory of the Adjara Autonomous Republic (2.9 thousand km², or 4.2% of Georgia's total territory). The study assesses the region's natural resource potential in terms of its influence on the development and optimal functioning of transport infrastructure.

The main objective of the research is to study the natural conditions and resource potential of the Adjara Autonomous Republic to solve specific problems related to the effective planning and development of transport.
