My research paper's topic is "Risks of Expected Natural Disasters in the Rioni River Valley." The purpose of this paper is to study the expected natural disasters in the Rioni River Valley, determine the potential risks, and review possibilities for their prevention. The paper utilizes historical, comparative, analytical, mathematical, cartographic, and other methods.

The first chapter discusses the historical and physical-geographical characteristics of the study region. The second chapter is entirely dedicated to the natural disasters recorded in the region and the damage they caused.

The conclusion examines environmental measures and recommendations, the implementation of which will contribute to reducing the risks of catastrophes and increasing the level of public safety in the Rioni River Valley.
