Bookify, an online hotel booking platform designed to simplify and modernize the process of booking accommodation in Georgia.

Project Content:

Bookify is a user-friendly and responsive web platform that allows users to browse, search and book hotel rooms in various cities in Georgia. The system displays more than 200 hotels, with full images, prices (displayed in GEL) and convenient filters for location, price range and recommendations.

The following programming languages and technologies were used in the project: (HTML, CSS, PHP, MySQL, JAVASCRIPT, Clerk Verification, ChatGPT API (ChatBot), DemoUser, Online Transactions (for testing only))
